CERTIFICATE

This is to certify that Mini Project Report entitled “BOUNCING BALL GAME” which is submitted by Prajjawal Kumar (2200900100100) in partial fulfillment of the requirement for the award of degree B.Tech in Department of Computer Science and Engineering of A.K.T.U is a record of the candidate own work carried out under the supervision of Ms. Shahina Anjum. The matter embodied in this mini project is original and has not been submitted for the award of any other degree.

Date: 30/08/2025

Ms. Shahina Anjum

(MPIA Coordinator)

Prof. (Dr.) B. Sharan

(Dean Academics & HOD-CSE)

ACKNOWLEDGEMENT

It gives us a great sense of pleasure to present the report of the B. Tech Project undertaken during B. Tech. Final Year. We owe special debt of gratitude to Ms. Shahina Anjum, Department of Computer Science and Engineering, IEC College of Engineering & Technology, Greater Noida for her constant support and guidance throughout the course of our work. Her sincerity, thoroughness and perseverance have been a constant source of inspiration for us. It is only her cognizant efforts that our endeavors have seen light of the day.

We also take the opportunity to acknowledge the contribution of Professor Dr. B. Sharan, Head, Department of Computer Science and Engineering, IEC College of Engineering & Technology, Greater Noida for his full support and assistance during the development of the project.

We also do not like to miss the opportunity to acknowledge the contribution of all faculty members of the department for their kind assistance and cooperation during the development of our project. Last but not the least, we acknowledge our friends for their contribution in the completion of the project.

ABSTRACT

This project presents the development of a Bouncing Ball Game using Python and the PyGame library. The game involves a ball that bounces off a paddle controlled by the player, with the objective of preventing the ball from falling. It integrates key features such as a lives system, high score tracking, restart and quit options, background image, and sound effects to enhance the gaming experience. The use of the PyGame library enabled efficient handling of game loops, collision detection, event management, graphics, and audio integration. This project not only provides an engaging and interactive game but also serves as a foundation for future enhancements such as difficulty levels, power-ups, and brick-breaking mechanics.
